

It is 50 years since Nick Gill took over a corner of his father's lace factory in Nottingham with an idea for a business venture to make clothing designed, at first, for the needs of dinghy sailors. Little did he imagine that, half a century on, the firm – and his surname – would have become internationally synonymous with all forms of sailing.

'I was a dinghy sailor, and there was very little dinghy clothing around,' recalls Nick, who grew up sailing National 12 dinghies on the Trent. Working with a pattern cutter and fabric suppliers, Nick drew on his experience to rethink clothing for sailors – and the marine brand Gill was born. It was 1975.

'The fact that I was sailing every weekend meant I would play around during the week and make up the sample and take it sailing at the weekend,' says Nick, who these days sails a Southerly 42 out of Falmouth in Cornwall. 'In the early days we had a lot of really innovative ideas that other people weren't doing.'

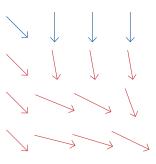

Those early innovations included internal bracing for all-in-one dinghy suits, which were more comfortable and offered improved mobility ('We sold tens of thousands of them,' says Nick). Then Gill launched its waterproofed two-piece dinghy outfit. 'That became an industry standard,' he says with pride. 'We were the first brand to do it.'

More firsts followed, as well as the Queen's Award for Enterprise, and the company grew rapidly.

In 1981, the firm supplied the British America's Cup entrant, Lionheart. The skipper, John Oakley, asked Nick to create sailing kit that had 'really low windage', with zips in the arms and legs, like on motorcycle clothing, to reduce the amount of spare or loose fabric. He also wanted detachable arms, so the clothing could be worn flexibly.

'That sort of stuff is all commonplace today, but in those days it hadn't been heard of,' says Nick. 'And though the boat was black, he wanted white gear — white sailing gear hadn't been done before.'

It also helped build the firm's name in big-boat offshore sailing. Gill got involved in what was then the Whitbread Round the World race, later known as the Volvo Ocean Race. Nick remembers one boat setting off for Cape Town in another firm's clothing. 'The crew got so wet,' he says. 'But one of them had used our gear, and he said no, we need to get you Gill gear. We got a call to say, "Can you get 15 sets down to Cape Town before the next leg?" which we did.'

HIGH SEAS:

50 YEARS OF GILL MARINE

1973.

Having grown up sailing dinghies, Nick Gill knew that sailors lacked the right gear to do what they loved. While studying at Trent Polytechnic he writes a business plan. An idea is born.

1975.

Nick launches Gill Marine in a corner of his father's lace factory. At first it's just him, a designer, and a van driver named Gordon.

1981.

Thanks to a combination of ingenuity and a continuous focus on making the best for sailors, Gill is asked to provide sailing gear for the crew of Britain's America's Cup entrant, Lionheart.

1982.

Gill introduces an integral brace system into the firm's one-piece dinghy suits – a major success.

1989.

Gill creates the world's first 2-piece Dinghy Suit. This innovative breakthrough sets a new industry standard and rapidly gains popularity, ultimately becoming a bestseller and synonymous with the brand.

1994.

Gill is appointed as the official clothing supplier to Team GBR, the British Olympic Sailing Team – a high-profile partnership on the international stage.

1995.

Gill introduces the revolutionary Speedskin for the 1996 Atlanta Olympics. Designed for the warm and humid conditions of Atlanta, the Speedskin transformed the traditional neoprene alternative.

2001.

Gill works with Illbruck, winner of the 2001-02 Volvo Ocean Race, to design gear aimed at enhancing performance. Over the course of two years, a cutting-edge 3-layer fabric system is developed, and it remains a cornerstone of the XPLORE+® product range.

2005

Gill introduces its evolutionary Skiff Trapeze Harness, which sets new industry standards for safety and comfort.

2006.

Gill brings its patented Pro Glove to market. It is three times more durable than any other glove available.

2008.

Gill unveils its groundbreaking Compressor Vest. Boasting ergonomically shaped foam panels encased in neoprene, it transforms the standards for buoyancy vests, offering significant advantages over its traditional foam predecessor.

2012.

Gill is presented with the prestigious Queen's Award for Enterprise – a recognition of worldwide success.

2014.

Gill becomes official clothing sponsor of Emirates Team
New Zealand in the Extreme
Sailing Series – an opportunity to take testing standards to a whole new level.

2015.

Gill introduces its products into the sport fishing market in the United States, where Gill jackets had begun to gain traction among competitive anglers.

2019.

Gill becomes Technical
Clothing Partner of the new
high-performance SailGP race
franchise, with the honour of
outfitting both the GBR and
USA teams. This partnership
provides an opportunity to
innovate further, and develop
a new wave of neoprene
products to revolutionise the
dinghy collection.

2020.

Gill celebrates the 20th anniversary of a beloved global bestseller – the OS2 Offshore Jacket. Made to offer sailors unparalleled protection on the water, its enduring popularity is a testament to unwavering performance and timeless design, making it a cornerstone of the range to this day.

2022.

Gill becomes the official clothing partner of the US Sailing Team, emphasising a peerless commitment to innovation and excellence.

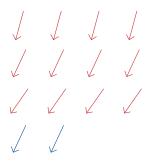

2023.

Gill's commitment to product innovation continues, creating the most environmentally friendly sailing apparel on the market, without compromising on performance. The Gill OS2 Offshore Jacket and Salopettes is the world's most sustainable sailing suit, made from 98% recycled materials.

2025.

Gill Marine celebrates 50 years of providing sailors with gear Engineered for the Elements.

As well as working to improve critical components like seams and seals, Gill has also developed its own waterproof fabrics.

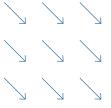

'The surface area of a drop of seawater is completely different to fresh water – it's much bigger and it's abrasive,' explains Nick. 'That's why outdoor brands that just want to keep you dry from the rain don't work at sea. The seawater and the atmosphere find it out. It's just completely different.'

Work began in the 1980s to develop fabrics that paved the way for Gill's XPLORE* and XPLORE+* fabrics of today. 'We set much higher waterproof standards,' says Nick. 'When we were doing water testing, the technician we had at the time drove to Skegness and back to get a barrel of seawater, because he didn't want to test with fresh water.' Nick also remembers using a rain room at Leeds University to test out the offshore sailing gear. 'We stood in that rain room for hours on end, just checking the neck seals and that sort of thing,' he laughs. 'A lot of the new start-up brands wouldn't do any of that.'

The firm continues to test fabrics in a high-humidity oven to check for delamination. And another of Nick's innovations continues to this day: Gill tests the strength of fabrics using the Martindale abrasion machine, but instead of rubbing the fabric using worsted cloth, as in the standard test to assess durability, Gill switched it for sandpaper. 'Compared with a non-slip deck, worsted cloth meant absolutely nothing,' says Nick. 'We bought the Martindale abrasion machine and then got 320-grit sandpaper, because that's what a deck's like. We'd abrade fabrics until they had a hole in them. And that's how you knew which fabric was the best.'

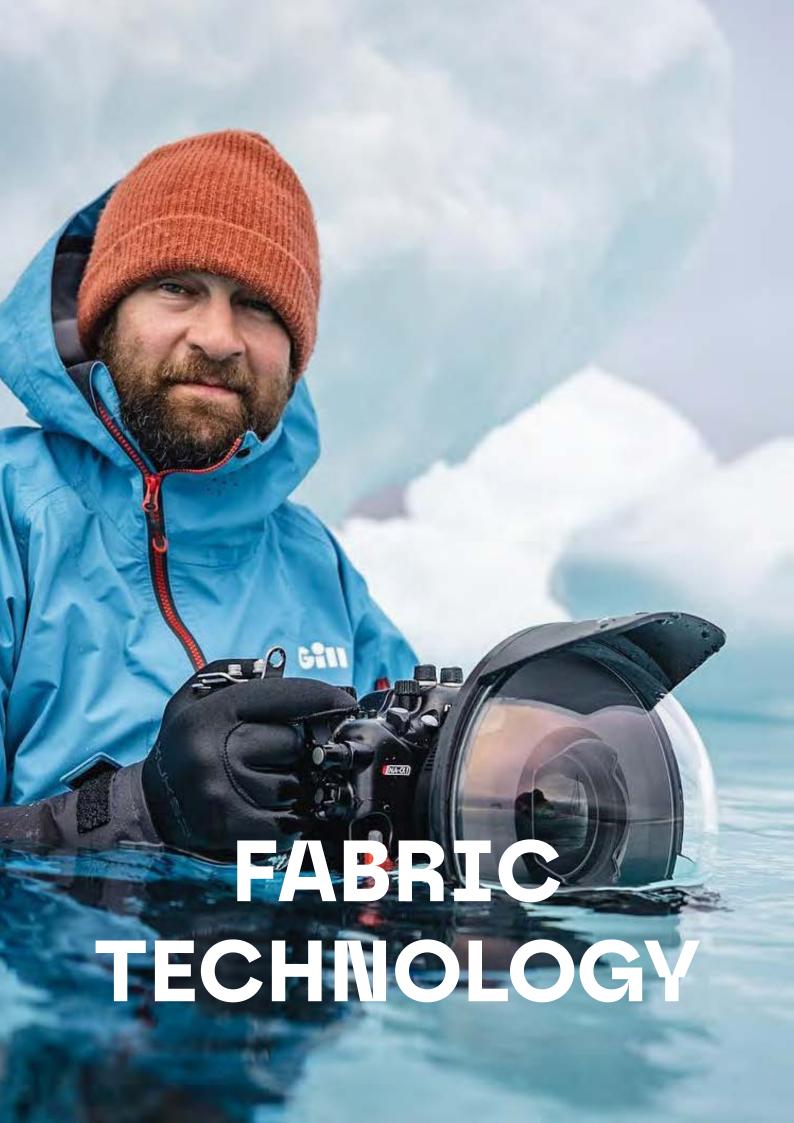

In 1988, Gill opened a new factory, followed by a second facility in 1992. The headcount of the firm, meanwhile, grew to more than 100.

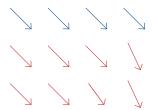

Throughout, Nick – who stood down as a director in late 2018 – says there's been a continuous commitment to improving and finessing products, and remaining true to the sailing core of the brand. So what does it feel like to see the firm he founded all those years ago reach its half-century? 'In the early days, you don't really look beyond the next year,' he says. 'I remember getting to the 10th anniversary and suddenly feeling like I'd been around forever.' He pauses, before continuing: 'I could never imagine it going for this long. So it makes me very proud. I am still emotionally very involved.'

Sailing focus: Gill Marine CEO John Hibbard (left) joins founder Nick Gill (right) aboard his Southerly 42, Malouine, off the coast of Cornwall

Unrivalled Performance and Comfort

Time on the water is about more than just braving the elements – it's about thriving in them, which means sailing kit needs to be reliable and, more importantly, comfortable.

This belief drives us to take a unique approach, creating proprietary fabrics for our waterproof apparel that redefine the industry's standards of excellence.

We subject our waterproof products and proprietary fabrics to extreme testing of their durability and water-repellency, thereby ensuring that when you need to stay protected, you can trust Gill to deliver, because we don't compromise. True comfort is not just about staying dry – it's about feeling secure and confident during every moment on the water.

In this guide, each waterproof product is clearly marked with its waterproofness, breathability and durability using the icons below.

WATERPROOFNESS

Durable

Fabric Durability

To assess the durability of our fabrics, we employ the internationally recognised Martindale Test, also known as the 'Rub Test'. Our version of this test yields true-to-life results by subjecting the fabric to continuous abrasion, rather than merely rubbing two cloth swatches together. Using a Martindale abrasion machine, a piece of fabric is placed between two discs, with one disc oscillating grit paper across the fabric until signs of distress appear. We hold our waterproof products to a minimum testing standard of 10,000 oscillations, which is three continuous hours of rigorous grit-paper testing.

Our OS1 jacket undergoes an extensive 8-hour Martindale Test. Where reinforcement fabrics are used, such as the seat of the jacket or seat and knee area of the salopettes, this is increased to 33 hours of continuous abrasion testing, ensuring unmatched durability for our sailing gear.

Defying Water Penetration

At Gill, we believe in setting the bar higher when it comes to waterproof performance. This commitment to excellence begins with Hydrostatic Head testing – a meticulous examination of how waterproof our fabrics are, giving a measurement expressed in mm (representing how high a column of water would need to be before it penetrates a fabric, causing it to fail). While some international standards permit up to three water droplets to permeate before declaring a fabric non-waterproof, at Gill we take a different approach - we stop at the first droplet. Our minimum testing threshold is 10.000mm. although the majority of our fabrics continue to perform well at more than 20,000mm, with our OS1 Ocean XPLORE+ fabric still waterproof over 30.000mm.

Waterproof Fabrics

As a world leader in marine apparel, our ethos has always been to think differently, push the boundaries of innovation, and redefine standards by embracing a unique approach. Rather than settling for conventional, off-the-shelf branded fabrics in our range, we have made it our mission to develop our own fabrics, so we can ensure that they are truly fit for purpose and will withstand the rigours of the ocean. Whether it's enhancing lightness, durability or breathability, we engineer fabrics that surpass expectations. Our commitment to excellence is evident in comparative tests, in which our fabrics consistently outperform other well-known brands.

SHIELD Technology

Exceptional Water Repellency

The Gill SHIELD technology found on all of our XPLORE and XPLORE+ fabrics is PFC/PFAS-free C0 technology, supporting our drive to reduce the impact on the environment.

SHIELD technology offers incredible levels of water repellency, giving wearers even greater confidence and comfort when out on the water. Saltwater can easily cause 'wetting out' (where water vapour condenses inside a waterproof layer) – but, thanks to SHIELD, it rolls effortlessly off our waterproof products.

SHIELD does not change the hand feel, comfort or breathability of garments. Each fibre of the outer fabric is coated with SHIELD technology during the manufacturing process, resulting in a durable and long-lasting finish.

XPLORE®

2-Layer Fabric: Your Gateway to Unmatched Protection

XPLORE® boasts a robust 2-layer construction that forms an impenetrable barrier against the elements, keeping you comfortable in the face of the worst conditions. Rigorously tested to a 30,000mm column of water on the Hydrostatic Head, this fabric not only meets but exceeds established waterproofing benchmarks. Its incredible water resilience guarantees that you'll stay dry, defying the challenges posed by unpredictable weather. This fabric has undergone a demanding 4-hour Martindale Test (which involves continuous abrasion with grit paper) to confirm its impressive durability.

XPLORE+®

3-Layer Fabric: Unyielding Waterproof Performance

This highly advanced material ensures a fully waterproof and breathable barrier, keeping you shielded from the harshest elements while allowing your body to breathe. Rigorously tested to a 35,000mm column of water on the Hydrostatic Head, this fabric exceeds waterproofing standards, ensuring that you stay dry and comfortable regardless of the weather conditions you face. XPLORE+® has been subjected to an exhaustive 8-hour Martindale test - a true testament to its robust nature, and a demonstration of its ability to withstand wear and tear that few others can match.

Sun Protection

At Gill we prioritise providing top-tier sun protection in our clothing and accessories. Every fabric in our collection with an Ultraviolet Protection Factor (UPF) rating undergoes rigorous independent testing and certification to ensure it meets stringent standards for UV protection. All of our fabrics with a UPF rating of 50+ are categorised as offering 'Excellent' protection – the highest possible rating.

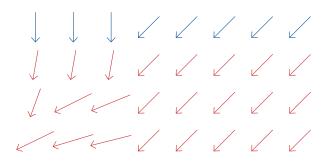

When it comes to shielding yourself from the sun's harmful rays, choosing the right clothing is paramount. This is especially crucial for those who spend extended periods outdoors, particularly on the water, where UV exposure is intensified.

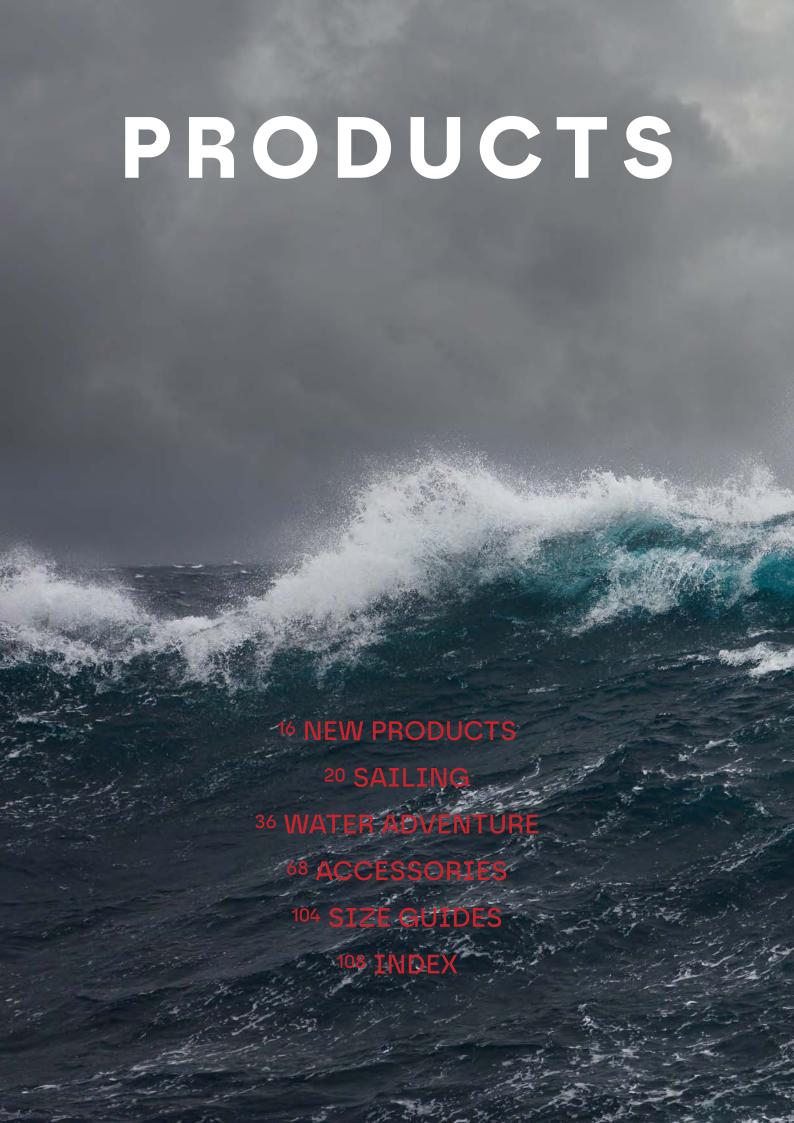

The UPF of our fabrics speaks volumes. With UPF 50+, our fabrics block a staggering 98% of the sun's rays. This translates into a significantly reduced risk of exposure, providing you with peace of mind, as the more coverage you have, the greater the level of protection.

Choosing the right accessories can also enhance your defence against the sun. Our caps offer shade for your scalp and face, while our Wide Brimmed Sun Hat extends protection to your neck and ears. For body coverage, we offer long-sleeved UV Tec Shirts, and all of our sunglasses boast polarized lenses and 100% UV 400 protection.

Prolonged exposure to water, or stretching, can diminish the protective capabilities of Gill garments, so the firm recommends complementing its UPF clothing with regular application of high-factor sunscreen.

Gill's ambition is to allow you to embrace the sun without worry, with the promise of superior sun protection guaranteed.

X4 SUPER-STRETCH

With up to 2x the stretch of standard neoprene, these materials provide the ultimate freedom of movement.

4 WAY STRETC

Materials designed to stretch in all directions, allowing complete freedom of movement.

HERMAI PROTECTION

Materials designed to improve thermal efficiency by trapping body warmth.

GLIDESKIN

Low-friction glideskin neoprene strategically placed for comfort against the skin and protection from chafing.

DI-GUARD

High-tenacity neoprene designed to protect against wear. Strategically placed panels resist abrasion and prolong the life of your garment.

RECYCLED CONTENT

SUN PROTECTION UPF 50

UPF stands for ultraviolet protection factor and is the sun protective rating measure for fabrics.

UPF 50+ is the maximum sun protective rating achievable for fabrics and means that the fabric blocks at least 95% of UVA and 98% of UVB rays.

Sun exposure causes skin damage Only covered areas are protected EN 137358-2:2003+A1:2006 (E)

OS1 OCEAN JACKET OS13J

Technology:

- XPLORE+® 3-layer waterproof and breathable fabric
- SHIELD® PFAS free water repellent finish
- High performance, durably waterproof and breathable

Features/Benefits:

- · Ocean height collar with a concealed, wrap-around face guard
- Thermal brushed mesh inner collar and chin guard
- Abrasion resistant panels to protect against wear and tear
- Photoluminescent safety reflectors
- 2-way zipper protected by a double storm guard
- Deep cargo pockets with secure closure with hand warmer pockets behind
- Chest hand warmer pockets
- Adjustable outer cuff with hi-vis PU inner seals for watertight comfort and increased visibiity
- PLB attachment point
- · Security pocket protected by a YKK Aquaguard zipper
- · Shackle tool and hanging clip included

Fabric Composition:

- Shell: 100% Nylon
- Panel: 100% Polyester

Features/Benefits:

- Flatlocked seams for comfort
- Silicon grip pattern on sole

Fabric Composition:

• 84% Polyester / 16% Elastane

Colour: Black. Sizes: S-XL

EYEWEAR

We've refocused our Eyewear offer by introducing a range of new and updated styles. We've also simplified our messaging and sales proposition so that each new development shares several common features that make them perfect for use on the water and help set our offer apart. All our styles benefit from multilayer polarized lenses with Category 3 tinted protection, UV 400 filters that block almost 100% of the sun's UV rays and they all float in water. An increasing number of styles also feature plant-based frames made using a renewable resource, reducing our reliance on petroleum-based plastics.

Polarized

Polarized lenses eliminate the distracting glare produced by light reflecting off the water or bright deck surface.

Floating

Designed for life on the water, all of our sunglasses float.

Plant-Based Frames

Our bio-based plastic is made using a renewable plant resource, a much cleaner alternative to petroleum-based plastics.

Tinted Protection

Our Category 3 lenses block 82-92% of UV light, making them an excellent choice for protection from bright sunlight.

UV Protection

UV 400 lenses block almost 100% of the sun's UV rays (both UVA and UVB) from damaging your eyes.

Clarity

Optical Class 1 lenses provide distortion free vision and reduce eye fatigue.

Hydrophobic

Hydrophobic outer coating sheds water and reduces salt residue for clear vision.

Oleophobic

Oleophobic technology applied to the inside face repels fingerprints, sun lotion and skin oils.

Sizes based on the average height of 5'4'' - 5'6'' (163-168cm) and the average inside leg of 30'' - 32'' (76-81cm)

All of our garments are sized and fitted with end use in mind, we have defined our different types of fit here.

Products not labelled as one of our other specific fits will be a regular fit.

Next to Skin
Follows the contours of
the body giving freedom
of movement.

Slim Fit Closer fit, giving a silhouette that skims over the body.

Regular Fit
Neither close fitting or
oversized, designed to be
versatile and fit as expected
for the products' intended
end-use.

Relaxed Fit
Cut looser with more room
around the body. Ideal for
layering over other pieces.
